

表二

105 學年度 商學院 英語授課課程大綱

課程名稱 Course Title 模組 類別	(中文) 商業資料分析：R運算 (英文) R Computing for Business Data Analytics
課程目標 Course Objectives	My goal is to help students become proficient in statistical computing and data analysis using R. After taking this course, students will be able to apply introduced techniques to facilitate decision making and conduct their own research.
課程大綱 Course Description	This is a course in business data analytics for senior undergraduate and graduate students. Although the focus is applied computation, necessary theoretical aspects will be covered as well.
上課進度 Weekly Course Schedule	Lecture 1: R as a computing environment (weeks 1-3) Lecture 2: Programming with R (weeks 4-5) Lecture 3: Probability distributions (weeks 6-7) Lecture 4: Monte-Carlo simulation (weeks 8-9) Lecture 5: Distribution fitting & MLE (week 10-11) Lecture 6: Numerical methods (week 12) Lecture 7: Linear regression & quantile regression (weeks 13-14) Lecture 8: Generalized linear modeling (weeks 15-16) Lecture 9: Principal component & cluster analysis (week 17) Lecture 10: Nonlinear models (week 18)
教學方式 Instructional Method	This is a lecture-based course. In each session I will give a detailed lecture about the essence of programming and modeling topics.
課程要求 Course Requirements	Prerequisites: Introductory calculus and statistics.
評量方式 Evaluation	<i>Homework</i> : 60% I will distribute 6 assignments (10% each) during the semester. <i>Term Project</i> : 40% You have to form a group of 3-4 people to work on this project. The project will require you to identify a question and apply technique(s) that you learn from this course. Each group will have to turn in a written report and the R code.
教材及參考書目 Textbooks & Suggested Materials	Lecture notes will be provided and NO textbooks are required.
